Manacomm publishes utility for mobile phone ringtones that ends compatibility problems

RingtoneStudio 2 is the third addition to Manacomm's new range of conversion software for personal media and communication devices. Following success in the European market, German developer S.A.D has joined with Manacomm to introduce RingtoneStudio 2 to Australia and New Zealand.

RingtoneStudio 2 gives complete creative control for making ringtones from start to finish. Record from your PC or import songs off other media, edit the song in the program and you're done!

RingtoneStudio 2 provides three 'Realtone' file formats and four methods of transmission from PC to mobile phone. A selection of popular compatible phones include: Nokia®: 6260, N70, 6280; Motorola®: E398, SLVR L7, RAZR V3x; Sony Ericsson® K700i, P901i, K750i, K800i; Samsung®: E720, D500, Z510; and more.

Purchasing ringtones direct to your mobile phone can often lead to problems, as Manacomm's Director of Publishing, James Mackay explains. "It can get expensive buying individual ringtones and often you will end up paying for it before you've been able to listen to it or know if it will be supported by your phone. RingtoneStudio 2 lets you create an unlimited number of ringtones and you get to choose the way you transmit it to your phone."

Features and Benefits:

- Supports 'Realtone' WAV, MP3 as well as SMAF/MMF ringtone formats.
- Phones that support one of the four transmission methods (Bluetooth, Infrared, WAP or Data cable) will be compatible.
- The integrated cutting and editing functions allow the user to create unique ringtones.
- Record and edit any audio signal that can be played on your PC – not just audio CDs but dialogue or even audio off websites.

RingtoneStudio 2 makes creating and transmitting ringtones simple and fun! RingtoneStudio 2 retails for \$29.95 and is available now from major retailers.

Ends
